

# Blueprint for 5' By 5' Butterfly Garden

Sun to Partial Shade

*"Always keep butterflies in your field of vision" — Catherine LaBrie*

5 feet (N with number in diagram = native plant)

### Garden Tips:

- Select native plants as much as possible
- Buy from nurseries that do not treat plants with pesticides
- Water well until established, then fairly drought tolerant
- Mulch with sustainable mulch (ex. Florimulch)
- Lightly fertilize with time released 5-10-10:
  - On planting
  - Every month during rainy season
  - Every other month rest of year
- Trim, deadhead as needed

### Key (1 gallon-sized containers unless as noted):

- |                                                                                                                                                                                                                                                                                                                                                                                                                                              |                                                                                                                                                                                                                                                                                                                                                                                              |
